

Tree

You are the most enormous tree!
You take up far more space than me.

Your trunk is tall and thick and round,
Your roots spread wide beneath the ground.

Your boughs look like a big, green broom.
Why does one plant need so much room?

'Think about it!' says the tree,
'Use your eyes and you will see,
Many creatures live in me.'

Here are just some of the birds, animals and insects that live in or near trees. Can you think of anymore?

Frisky squirrels, hooting owls, cooing pigeon and whistling blackbirds.
Cheery robins, chirpy chicks, fluttery moths and busy bees
Hungry caterpillars, busy beetles, wriggly worms and ... what else can you think of?
